

Hideaki Nagase is Professor and Head of Matrix Biology Department at the Kennedy Institute of Rheumatology Division, Imperial College London, London, UK. He is investigating the structure and function of matrix metalloproteinases and tissue inhibitors of metalloproteinases (TIMPs) and their roles in cartilage matrix destruction during the progression of arthritis. He holds a B.Sc. in Pharmacy from Tokyo College of Pharmacy, a M.Sc. degree in Physiological Chemistry from Science University of Tokyo in Japan and a Ph.D. degree in Biochemistry from the University of Miami, USA. He received his postdoctoral training at Strangeways Research Laboratory, Cambridge, UK and Dartmouth Medical School, USA. He was elected as an Honorary Fellow of The Royal College of Physicians in 2004. He elucidated the stepwise mechanism of activation of matrix metalloproteinases and the inhibition mechanism of TIMPs, the latter in collaboration with Professor Wolfram Bode and Professor Keith Brew.
